

Scala Cassandra Tableau

Sheng Huang

Scala

- ▶ Designed started in 2001, Released in 2004
By Martin Odersky
- ▶ Scalable Language
 - ▶ Object Oriented and Functional Programming
- ▶ Runs on JVM and is statically typed

BIG CONCEPT

- ▶ Machine Learning concepts
- ▶ Similar to Java but concise
- ▶ Spark - Scala
- ▶ Versatile

1

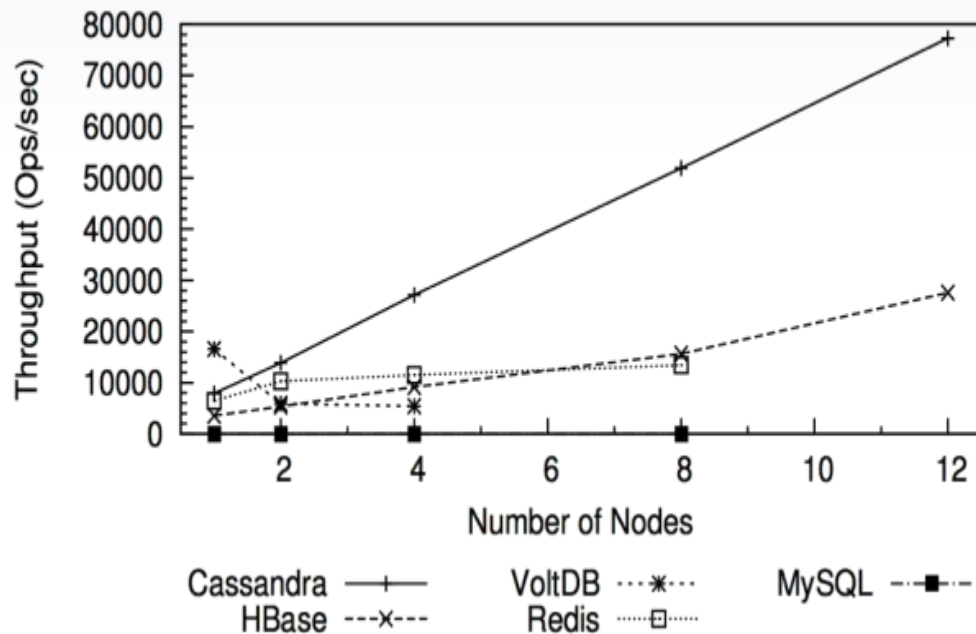

Cassandra Database

► Overview of Cassandra

- ▶ Released in July 2008
- ▶ Avinash Lakshman and Prashant Malik
- ▶ Fault Tolerant
- ▶ Decentralized
- ▶ Scalable

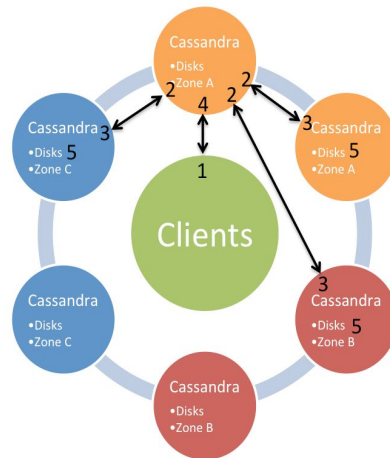

Architecture

Cassandra Write Data Flows

Single Region, Multiple Availability Zone

1. Client Writes to any Cassandra Node
2. Coordinator Node replicates to nodes and Zones
3. Nodes return ack to coordinator
4. Coordinator returns ack to client
5. Data written to internal commit log disk

If a node goes offline, hinted handoff completes the write when the node comes back up.

Requests can choose to wait for one node, a quorum, or all nodes to ack the write

SSTable disk writes and compactions occur asynchronously
